Part A : General overview

1 Introduction

Dubai Municipality prepared this guideline based on Law No. (5) of 2025 Concerning Public Health in the Emirate of Dubai , and Law No. (2) of 2026 on public safety in the Emirate of Dubai. , in accordance with the transparency and governance aspects in the emirate of Dubai. Compliance program assigned to maintain, monitor and control health and safety in Built environment.

Despite of control term , compliance and avoiding damage to human health may achieved when rules harmonization applied under normal or reasonably foreseeable practices taking into account awareness of all contributed parties.

Therefore, this guideline released to highlight parties involvement and contribution towards compliance.

2 Purpose

This guide designed to ensure and enhance the commitment of the relevant entities to the regulations and requirements adopted in Dubai Municipality and to achieve a high level of health and safety in the built environment and enable them to monitor the extent of their commitment.

3 Objectives

- To ensure commitment with unified environmental health requirements at related business activities in the Emirate of Dubai.
- To educate related business activities owners, workers and person in charge with environmental health risks.
- To assure business continuity in line with implemented regulations.
- To raise public awareness of environmental health.

4 Acts and Legislations

It is difficult for Dubai Municipality to perform its duties and specialties as an institutional organization without having a legislative system that regulates its activities, draws the framework of its relationship with the local community and gives legitimacy to its actions. Therefore, the decree issued regarding the municipality foundation has contained a provision on giving it the authority and power to issue orders, regulations and decisions.

Current Legislative Law that apply founded as per Law No. (5) of 2025 Concerning Public Health in the Emirate of Dubai , and the Law No. (2) of 2026 on public safety in the Emirate of Dubai , In addition to compliance with inspection and control procedures as per the International Standard ISO/IEC 17020.

5 Scope

Dubai Municipality shall measure and raise built environmental health compliance level in all built environment in the Emirate of Dubai, which include, but not limited to, consumer products dealing establishments, along with all parties contributed in part or all of business activity.

Where compliance level measure current measurable indicators of public health, safety, consumer products and indoor air quality.

6 Definitions and terms

Definition	Meaning
Public health	The art and science of preventing disease, prolonging life and promoting health through the organized efforts of society.
Environmental health	Environmental health addresses all the physical, chemical, and biological factors external to a person, and all the related factors affecting behaviors. It encompasses the assessment and control of those environmental factors that can potentially affect health. It target towards preventing disease and creating health-supportive environments.

	Doc Ref:	DM-HSD-GU83-ECP2	رمز الوثيقة:	

Definition	Meaning
Built environmental health	The built environment touches all aspects of our lives, encompassing the buildings we live in, the distribution systems that provide us with water and electricity, and the roads, bridges, and transportation systems we use to get from place to place. Generally described as man-made or modified structures that provide people with living, working, and recreational spaces. Creating all these spaces and systems requires enormous quantities of materials.
Compliance level	Indicate the degree of compliance that your organization has achieved for a program or to overall commitment with requirement, which expressed by range of grades.
Risk management module	Process of identifying, assessing and controlling threats. These threats, or risks, could stem from a wide variety of sources, including all built environmental health hazards.
Catastrophic case	Any event or force of nature that has disastrous, fatal consequences.
Sample	All, part, quantity or part of the confiscated original material or product to represent its status against applied tests and/or investigation.
Contamination	Sample impurity by exposure to or addition of a poisonous or polluting substance.
Microorganism	Or Microbes, which are tiny living things that are found all around us and are too small to be seen by the naked eye. Some microbes make us sick, others are important for our health. The most common types are bacteria, viruses and fungi.
Chemical pollution	Presence or increase in our environment of chemical content that are not naturally present there or found in amounts higher than their natural background values.
Microbiological pollution	Presence or increase in our environment of tiny small organism that call microorganisms.

8 Risk module

The following explain the Risk assessment of the severity of the potential risk & Probability of repetition:

Probability of repetition	Severity of the potential risk				
	Very Low	Low	Medium	High	Very High
Almost certain	Minor	Major	Critical	Catastrophic	Catastrophic
Likely	Minor	Major	Critical	Critical	Catastrophic
Possible	Minor	Major	Major	Critical	Critical
Unlikely	Minor	Minor	Major	Major	Major
Very Unlikely	Minor	Minor	Minor	Minor	Minor

Probability of repetition & Severity of the potential risk indicators			
<u>Probability of repetition</u>	<u>Description</u>	<u>Risk severity</u>	<u>Description</u>
Very Unlikely	Not occurred before	Very Low	No environmental health risk
Unlikely	Occurred outside Dubai	Low	Insignificant environmental health effect
Possible	Occurred at least once in similar scope operations	Medium	Acute limited or temporary environmental health effect
Likely	Known at least once within business scope	High	Chronic or permanent environmental health effect
Almost certain	Repeated in similar operations within scope	Very High	Widespread environmental health effect

The following explain the required action for the assessed risks:

RISK ASSESSMENT	Required action
Minor	Operation, activity or mission could be ran/continued with current procedures.
Major	Operation, activity or mission could be ran/ continued with current procedures, with providing recommended corrections/other way of procedures implementation.
Critical	Operation, activity or mission must be ran/ continued with current procedures , by providing mandatory corrections/other way of procedures implementation during proposed period of time and monitoring action. Must stopped in case of non-commitment within period.
Catastrophic	Operation, activity or mission must be stopped until corrections obtained, with re-assessment before re-launching operation or activity.

Note: Each requirement violation assessed to its risk based on business activity type, and upon final findings grade of establishment estimated.

Availability of self compliance monitoring program Audits and records upon request.	Minor
Prsence of eyewash installations as per activity and in chemicals handling areas.	Critical
Presence of Suitable Furniture and in good conditions not affecting built environmental health.	Critical
Presence of safe tools and equipment in good and suitable operational conditions.	Critical
Following proper colour coding of water, steam, diesel or gas lines.	Critical
Presence of safe machines and devices in good and suitable operational conditions.	Critical
Presence of proper premise public and operational safety means.	Critical
Presence of safe electrical circuits, wiring and approved electric system.	Catastrophic
Presence of covered and plugged electrical ends.	Catastrophic
Presence of electrical sockets and plugs in good condition and in suitable location.	Catastrophic
Avoiding heavy load on socket outlets.	Catastrophic
Proper electrical isolation switches for each machine shall be provided and easily accessible.	Catastrophic
ELCB (Earth-Leakage Circuit Breaker) shall be provided in all electrical circuits.	Catastrophic

Annex 3: Indoor air quality requirements.

Good physical conditions and cleanliness of indoor air conditioning system components inside and outside premise.	Critical
Absence of blockage or obstruction of ventilation system outdoor air inlet.	Critical
Effective periodical maintenance for indoor air conditioning system and its components shall be handled by specialized company.	Critical
Free indoor condensation or residues or signs of the same inside premise.	Major
Presence of valid indoor air system maintenance contract.	Major
Presence of records or log for indoor air conditioning system periodical maintenance and inspection.	Major
Premises shall provide well designed effective mechanical ventilation air conditioning system - MVAC - , and fit premise nature and area.	Critical
Suitability of ventilation system outdoor air inlet location from sources of contamination.	Critical
Presence of suitable dust filter system installed in the outdoor air intake.	Critical
